The Woodlands Township began offering water bikes as a new and exciting rental option at Riva Row Boat House today, May 21, 2020. Water bikes are being added to the many rental options already available at Riva Row, including single and tandem (or double) kayaks, stand-up paddleboards and swan pedal boats. “We are happy to announce this new addition of water bikes to the Riva Row Boat House – especially now that we are entering Phase Two of the Governor’s orders of Opening Up Texas,” stated Township Chairman Gordy Bunch. “We look forward to our residents coming out and enjoying one or more attractive features (The Woodlands Waterway) and enjoying the outdoors in The Woodlands.”

These fun additions to The Woodlands Waterway will be positioned in the lower level of the waterway along with kayaks and paddleboards, and riders will be able to explore the area from Riva Row Park all the way out to the edge of Lake Woodlands, passing the Grogan’s Mill Bridge and East Shore, and discovering Mitchell Island on the way. Coronavirus Testing Basics

There are two different types of tests – diagnostic tests and antibody tests. A diagnostic test can show if you have an active coronavirus infection and should take steps to quarantine or isolate yourself from others. An antibody test looks for antibodies that are made by the immune system in response to a threat, such as a specific virus. [Learn more](#) about the different types of tests and the steps involved.

SOCIAL DISTANCING KEEPS US SAFER

As we navigate this difficult time, The Woodlands Township encourages residents to observe CDC guidelines for social distancing and safety.

When in doubt: Stay home as much as possible and limit your person-to-person interactions.

CDC Reaffirms Virus Spreads More Through Person-to-Person and Not Surfaces

According to the CDC, social distancing is still the most important method of avoiding the COVID-19 virus, and residents are urged to understand how the virus is thought to spread:

- Between people who are in close contact with one another (within about 6 feet).
- Through respiratory droplets produced when an infected person coughs, sneezes, or talks.
- These droplets can land in the mouths or noses of people who are nearby or possibly be inhaled into the lungs.
- COVID-19 may be spread by people who are not showing symptoms.
